All-rounder with safety

**SL20.310**

- Input: 3 AC 400-500V
- Output: 24-28V / 490W
- Power boost up to 600W
- Separate primary fuse not necessary
- Switchable operating mode (single/parallel)
- Switchable overload behaviour options (Fuse Mode)

**Short description**

This compact power supply unit is characterised by the variety of possibilities of application and low system costs. The fact that the external fuses are no longer necessary is an advantage as it saves cost and space. The switchable Fuse Mode and the extremely comprehensive approvals package including EN60204 make the SL20.310 the unit of choice.

At a competitive price, it also offers **25A power boost, output noise suppression**, optional Single Mode or Parallel Mode, small dimensions, more than **500,000h MTBF** as well as easy installation. The unit can be connected to European and American power supply networks without switching.

**Input**

- Nominal Input voltage: 3 AC 400-500V, ±15%
- 47-63Hz, suitable for IT power systems
- Rated tolerances:
  - Continuous opera. AC 340...576V resp. DC 450...820V
  - Please ask for 'application notes' at operation with DC input voltage.
- Input current: 3 x 1.5A
- Inrush current: <2.5A eff. resp. <7Apk

The unit is internally fused (fuse not accessible). For external fusing of unit and for input line protection, use circuit breaker with B-characteristic 10A or slower action, or alternatively T10A HBC fuse.

2-phase operation: Operation is possible even if one phase fails. With high ambient temperature or high load, P_out is adjusted downwards. The red LED is on. Also see Overload Behaviour (overleaf).

**Output**

- Output voltage: DC 24-28V adjustable by (covered) front panel potentiometer, preset: 24.5V ±0.5%
- Adjusting range guaranteed
- Output noise suppression: Radiated EMI values below ENS0081-1, even when long, unscreened output cables.
- Ambient temperature range: Operation: 0°C...+70°C (>60°C with Derating) Storage: -25°C...+85°C
- Derating: 12W/K (@ T_amb = +60°C...+70°C)

Output is protected against short-circuit, open circuit and overload.

**Rated continuous loading with convection cooling**

- T_amb=0°C...60°C: 24.5V/20A (490W) resp. 28V/18A (504W)
- T_amb=10°C...45°C: 24.5V/25A (612W) resp. 28V/22A (616W)

**Parallel operation**

- Yes, up to ten SL20

To achieve current sharing:

- Plug jumper into pos. 'Output parallel use'. This alters the output V/I characteristic to be 'softer' (25V at 2A, 24V at 20A). The output voltage can still be adjusted.
- Missing jumper = 'Single Use', i.e. 'hard' characteristic

**Construction / Mechanics**

- Housing dimensions and Weight:
  - W x H x D: 150mm x 124mm x 121mm (+ DIN Rail)
  - Weight: 1.8kg
  - Recomm. free space for conv. cool.: above/below 70mm, left/right 25mm
- All connection blocks are easy to reach as mounted at the front panel
- PVC insulated cable can be used for all connections, as the connection blocks are mounted in the cooler area on the underside of the unit.

Life cycle (electrolytics):
The unit exclusively uses longlife electrolytics, specified for +105°C (cf. ’The SilverLine’, p.2). High reliability and lifetime, as
• only 4 aluminum electrolytics and
• no small aluminum electrolytics are used.

Start Behaviour

Overload Behaviour

Two different operating mode options, switchable by plugging the front-panel OVL-jumper. If the jumper is missing, the unit is in the Fuse Mode. The unit is delivered preset in Continuous Mode.

a) Continuous Mode (continuous current):
• Jumper is in the ‘OVL cont. mode’ position.
• When overload or short-circuit occurs, the unit continuously supplies current (see. diag. 1), no Hiccup.

Advantage: The unit starts reliably even with heavy, non-linear loads (high capacities, DC-DC converters, motors). The high short-circuit current triggers downstream fuses, and allows for selective configuration of electrical installations.

b) Fuse Mode (Switch-off after typ. 4s):
• Jumper is in the ‘OVL fuse mode’ position.
• When overload, short-circuit or overload with 2-phase operation occurs or in case of overtemperature for more than typ. 4s, the unit switches off the output (residual volt. <3V without load, average short circuit current <0.1A)
• Definition of overload or short-circuit: The set output voltage in each case can no longer be maintained.
• The capacity to deliver current (PULS Overload Design) (see diag. 1) remains unchanged during the typ. 4s delay time.
• Red LED flashes at switch-off.

Feature: With some applications, the Fuse Mode can replace the usual fusing on the secondary side. The Fuse Mode has closer tolerances than thermal trips. The release delay time of typ. 4s ensures that motors can be reliably operated.

Re-start:
• by pushing the reset button on the unit’s bottom panel.
• by disconnection from mains and re-start of the unit after >1 min.

Overtemperature Protection

<table>
<thead>
<tr>
<th>Continuous Mode</th>

For further information, especially about, EMC, Connections, Safety, Approvals, Mechanics und Mounting, see page 2 of the „The SilverLine“ data sheet.
**Mechanics**

**SL20.310**

- Innovative DIN-Rail mount, unit holds even at vibration or lateral pressure
- Clearly arranged and user oriented
- Large, robust screw terminals
- Sealed metal housing
- Fine ventilating grid

---

**Construction / Mechanics**

**Housing dimensions and Weight**

- **W x H x D**: 150 mm x 124 mm x 121 mm (+ DIN rail)
- **Free space for convection cooling**: above/below 70 mm recommended, left/right 25 mm recommended
- **Weight**: 1.8 kg

Robust metal housing with fine ventil. grid (3.5 mm, IP20), to keep out small parts (e.g. screws)

**Monting**

on DIN rail (TS35/7.5 or TS35/15, 1...1.5 mm thick), therefore
- Simple snap-on system
- Sits safely and firmly on the DIN-Rail
- No tools required to remove

or backplane-mounted (two optional screw mounting sets SLZ01 required)

---

**Connections**

**Connections**

- **Input/Output**: 30 A per output
- **Current handling capacity**: Two connectors per output, Primary side: 9.52 mm between adjacent connectors, Secondary side: 6.35 mm between adjacent connectors

**Grid**

Screw terminals, connector size range: solid 0.5-6 mm² / flexible 0.5-4 mm²

---
