PRODUCT DESCRIPTION

The UZB12.261 is a non spillable maintenance-free VRLA lead-acid battery with absorbent glass mat (AGM) technology. It can be used as a battery replacement for many DC-UPS battery modules.

BATTERY REPLACEMENT

- Maintenance-free VRLA Lead-Acid Battery
- AGM (Absorbent Glass Mat) Technology
- Can Be Installed in Any Orientation Except Permanently Inverted
- 10-12 Years Service Life According to EUROBAT

SHORT-FORM DATA

Nominal voltage: DC 12V
Nominal battery capacity: 26Ah
Capacity class: According EUROBAT

Nominal battery life: 9 to 12 years
Battery current: Max. 45A
Max. 5.5A
Discharging current
Charging current

Recommended charging voltage:
- 13.9V At 10°C
- 13.75V At 20°C
- 13.6V At 30°C
- 13.45V At 40°C

Self-discharge rate: 3%/month At 20°C

Temperature range:
- -10°C to +50°C For charging
- -15°C to +60°C For discharging

Connection terminal: M5 female threaded bolt
Tightening torque: 3Nm / 26lb.inch

Size (WxHxD): 175x166x125mm
Weight: 9400g / 20.7lb

ORDER NUMBERS

Battery Replacement UZB12.261

MAIN APPROVALS

The information given in this document is correct to the best of our knowledge and experience at the time of publication. If not expressly agreed otherwise, this information does not represent a warranty in the legal sense of the word. As the state of our knowledge and experience is constantly changing, the information in this data sheet is subject to revision. We therefore kindly ask you to always use the latest issue of this document (available under www.pulspower.com).

No part of this document may be reproduced or utilized in any form without our prior permission in writing.

WARNING  Risk of electrical shock, fire, personal injury or death.
- Do not short-circuit the battery poles or power wires and always check correct battery polarity.
- Do not modify or repair the unit.
1. INTENDED USE

The battery is intended to be used as a battery replacement for DC-UPS systems.
Check the product datasheet of the DC-UPS or the battery module to confirm that it is suitable for the desired device.

2. INSTRUCTIONS FOR DISPOSAL OF THE BATTERIES

Always dispose batteries through a recycling organization.
Optionally, batteries can be returned to the supplier or the battery manufacturer. Batteries must be completely discharged before recycling.

3. INSTRUCTIONS FOR BATTERY STORAGE

Do not store batteries or battery modules at temperatures higher than 25°C or performance and lifetime may change.
Before initial use, check the last charging which is marked on the battery. If it is older than 9 months, replace the battery.
Do not store batteries longer than 9 months without charging or performance and lifetime may change. Every 9 months or whenever the open circuit voltage (OCV) falls below 12.6V, the battery module should be charged. Apply a charging voltage of 13.8V (at 25°C) for 72 hours. Batteries with an OCV below 12V should be disposed.
Frequently charging below +5°C reduces the lifetime of the battery.

4. INSTALLATION INSTRUCTIONS

Do not over-tighten screws of the terminal bolts of the battery. Recommended tightening torque is 3Nm (26 lb. inch).
Do not short-circuit the battery poles or power wires and always check correct battery polarity.
Install the device in a cool area inside an enclosure providing protection against electrical, mechanical and fire hazards.
Do not cover or block the pressure release valves of the battery. Do not install the battery with the valve pressure releases on the bottom side. Hydrogen gas can be released via pressure relief valves. It will form an explosive mixture in air when the concentration exceeds 4% in volume. It is mandatory to ensure sufficient ventilation of the battery.
The necessary ventilation and air flow must be calculated according to EN 50272-2.
The device is designed for pollution degree 2 areas in controlled environments. No condensation or frost allowed.
5. ENVIRONMENT

Operational temperature *) -10°C to +50°C (14°F to 122°F)
-15°C to +60°C (5°F to 140°F)
For charging
Frequently charging below +5°C (41°F) reduced
the lifetime of the battery
For discharging

Storage temperature -20°C to +60°C (-4°F to 140°F)
For storage and transportation
Recommendation:
Do not store at temperatures higher than 25°C
or performance and lifetime may change.

Humidity 5 to 95% r.h.
IEC 60068-2-30
Do not energize while condensation is present

Vibration sinusoidal ±4mm at 16.7Hz
fixed frequency for 1 hour
Vibration in vertical mounting orientation
according to IEC/EN 61056-1

Shock free fall from 20cm
onto a wooden floor
Shock with bottom down orientation
according to IEC/EN 61056-1

Altitude 0 to 6000m (0 to 20 000ft)
Degree of pollution 2
According to IEC 62477-1, not conductive

*) Operational temperature is the same as the ambient temperature and is defined as the air temperature 2cm below the unit.

6. APPROVED, FULFILLED OR TESTED STANDARDS

VdS Vendor Declaration
VdS Guidelines for Alarm Systems
Maintenance-free Lead Acid Batteries

UL 1989 Vendor Certificate
Standard for Standby Batteries
UL94: HB

7. REGULATORY PRODUCT COMPLIANCE

WEEE Directive Manufacturer’s Statement
EU-Regulation on Waste Electrical and Electronic Equipment
Registered in Germany as business to business (B2B) products.

EAC TR Registration EAC Certificate
EAC EurAsian Conformity - Registration Russia, Kazakhstan
and Belarus
8507208008, 8507202000, 8507600000, 8507800000

All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.

9. RECOMMENDATIONS FOR A LONG BATTERY LIFE

Temperature:
The temperature has the most impact on the service life. The hotter the temperature, the earlier the wear-out phase of the battery begins. The wear-out results in a degradation of battery capacity. Place the battery module in a cool location, e.g. near the bottom of the control cabinet. Do not place the battery module near heat generating devices. Do not overcharge batteries!

![Service Life vs. Ambient Temperature](image)

Number of discharge cycles and depth of discharge:
Do not discharge batteries more than necessary. Set buffer time limiter to the required buffer time. The number, as well as the depth of discharging cycles is limited. A replacement of the battery might be necessary earlier.
When choosing the battery capacity, always try to get the next higher capacity than required. The depth of discharge reduces the service life of the battery and limits the number of cycles.

![Battery Degradation vs. Discharging Cycles](image)

Store batteries fully charged
Do not store discharged batteries. Keep batteries fully charged!
Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster then charged batteries. Batteries which are not in use should be recharged at least once a year. The higher the ambient temperature, the shorter the charging interval. At storage temperatures higher than 30°C, recharging should be done at least every nine months.
