**PRODUCT DESCRIPTION**

The UZK12.071 battery module utilizes one non spillable maintenance-free VRLA lead-acid battery, which is assembled in a package with all wiring and fusing included.

The battery module is available in two different options. It can be ordered as UZK-module with a battery or as UZO-module without a battery which can be installed at a later date to avoid outdated batteries.

The battery module can either be mounted on a DIN rail or be screwed on a flat surface.

**SHORT-FORM DATA**

<thead>
<tr>
<th>Nominal voltage</th>
<th>DC 12V</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nominal battery capacity</td>
<td>7Ah</td>
</tr>
<tr>
<td>Nominal battery life</td>
<td>3 to 5 years</td>
</tr>
</tbody>
</table>
| Battery current | Max. 30A  
|                 | Max. 1.8A |
| Discharging current | At 10°C |
| Charging current | At 20°C |
| Recommended charging voltage | 13.9V  
|                                | 13.75V  
|                                | 13.6V  
|                                | 13.45V |
| Self-discharge rate | 3%/month |
| Battery fuse | 30A |
| Temperature range | -10°C to +40°C |
| Size (WxHxD) | 155x124x112mm |
| Weight | 3300g / 7.3lb  
|        | 600g / 1.32lb |

**ORDER NUMBERS**

| Battery Module | UZK12.071  
|                | Battery module with assembled batteries |
|                | UZO12.07  
|                | Battery module without assembled batteries |
|                | UZB12.071  
|                | Battery replacement 12V, 7Ah |

**MAIN APPROVALS**

The information given in this document is correct to the best of our knowledge and experience at the time of publication. If not expressly agreed otherwise, this information does not represent a warranty in the legal sense of the word. As the state of our knowledge and experience is constantly changing, the information in this data sheet is subject to revision. We therefore kindly ask you to always use the latest issue of this document (available under www.pulspower.com).

No part of this document may be reproduced or utilized in any form without our prior permission in writing.

WARNING Risk of electrical shock, fire, personal injury or death.
- Turn power off before working on the device and protect against inadvertent re-powering.
- Do not open, modify or repair the device.
- Use caution to prevent any foreign objects from entering into the housing.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on, and immediately after power-off. Hot surface may cause burns.
1. INTENDED USE

This device is designed for installation in an enclosure and is intended for commercial use, such as in industrial control, process control, monitoring and measurement equipment or the like.
Do not use this device in equipment where malfunction may cause severe personal injury or threaten human life.

2. INSTRUCTIONS FOR DISPOSAL OF THE BATTERIES

Always dispose batteries through a recycling organization. Optionally, batteries can be returned to the supplier or the battery manufacturer. Batteries must be completely discharged before recycling.

CAUTION: The unit contains wet cell batteries. Ventilation of the installation room in accordance with the rules of Canadian Electrical Code, part 1 is required if used in Canada.

3. INSTRUCTIONS FOR BATTERY STORAGE

Do not store batteries or battery modules at temperatures higher than 25°C or performance and lifetime may change.
Before initial use, check the last charging which is marked on the battery. If it is older than 9 months, replace the battery.
Do not store batteries longer than 9 months without charging or performance and lifetime may change. Every 9 months or whenever the open circuit voltage (OCV) falls below 12.6V, the battery module should be charged. Apply a charging voltage of 13.8V (at 25°C) for 72 hours. Batteries with an OCV below 12V should be disposed.

4. INSTALLATION INSTRUCTIONS

This device may only be installed and put into operation by qualified personnel.
This device does not contain serviceable parts, except the fuse or replacement battery. If malfunction should occur during installation or operation, first check the fuse and battery for proper functionality. If the unit is damaged or if the malfunction continues, immediately turn power off and send device to the factory for inspection.
Do not install the battery fuse until the installation work is complete.
Replacement fuses must be of the same type or an UL listed fuse with the same nominal value and characteristics.
Do not store batteries or battery modules at temperatures higher than 25°C or performance and lifetime may change.
Before initial use, check the last charging which is marked on the battery. If it is older than 9 months, replace the battery.
Do not short-circuit the battery poles or power wires and always check correct battery polarity.
Mount the device onto a heavy-duty DIN rail or screw it securely on a flat surface. Before mounting the unit on a flat surface, detach the DIN rail slider (remove the plastic lock mechanism by using a flat-blade screwdriver and move the lock downwards while pushing the plastic slide upwards at the same time) and the two aluminum DIN rail brackets (Torx T10 screwdriver).
Do not install the battery module upside down.
Install the device in a cool area inside an enclosure providing protection against electrical, mechanical and fire hazards.
Ensure sufficient ventilation by following the requirements of the EN 50272-2.
The device is designed for pollution degree 2 areas in controlled environments. No condensation or frost allowed.
The enclosure of the device provides a degree of protection of IP00.
5. INSTALLATION INSTRUCTIONS HAZARDOUS LOCATIONS

Instructions for Use in Hazardous Location Areas
Units which are marked with "Class I Div 2" are suitable for use in Class I Division 2 Groups A, B, C, D locations.
Units which are marked with II 3G Ex nA IIC T4 Gc are suitable for use in Group II Category 3 (Zone 2) environments
and are evaluated according to EN 60079-0 and EN 60079-15.

WARNING EXPLOSION HAZARDS!
Substitution of components may impair suitability for this environment.
Do not use batteries other than the original batteries supplied by PULS (UZB12.071 or UZB12.261) or batteries, which
are approved according to EN/ IEC 60079-7.
Do not disconnect the unit, remove or insert the fuse unless power has been switched off or the area is known to be
non-hazardous. A suitable enclosure must be provided for the end product which has a minimum protection of IP23
and fulfils the requirements of the EN 60079-15. Sufficient ventilation must be ensured in the final installation.
6. INSTRUCTIONS FOR REPLACING BATTERIES

Batteries need to be replaced periodically. The time interval depends on the ambient temperature in which the battery is used and on the number and depth of discharge cycles. In a typical application it is recommended to replace the batteries at least every 2 years.

Disconnect battery fuse before replacing the battery.
Regarding disposal of used batteries see chapter 2.

To replace battery:
1) Loosen screws (1) with only one turn.
   (Use a flat-blade or Torx T20 screwdriver)
2) Slide the mounting bracket (2) sideways.
3) Tilt the mounting bracket to the front and take it off.
4) Unplug the battery terminals.
5) Remove the battery.
6) To insert the new battery, use same procedure vice versa.
## 7. Environment

<table>
<thead>
<tr>
<th>Parameter</th>

Jun. 2021 / Rev. 2.4 DS-UZK12.071
All parameters are typical values specified at 25°C ambient temperature unless otherwise noted.
### 12. Physical Dimensions and Weight

<table>
<thead>
<tr>
<th></th>
<th>Width</th>
<th>Height</th>
<th>Depth</th>
<th>Weight 12V</th>
<th>Weight UZO</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>155mm / 6.1”</td>
<td>124mm / 4.88”</td>
<td>112mm / 4.41”</td>
<td>3300g / 7.3lb</td>
<td>600g / 1.32lb</td>
</tr>
</tbody>
</table>

For DIN rail mounting:
The DIN rail depth must be added to the unit depth to calculate the total required installation depth.

- **Weight**:
  - For UZK12.071: 3300g / 7.3lb
  - For UZO12.07: 600g / 1.32lb

**Bracket material**: Zinc-plated steel

---

**Fig. 12-1** Front view

**Fig. 12-2** Side view

**Fig. 12-3** Isometric view

Jun. 2021 / Rev. 2.4 DS-UZK12.071

All parameters are typical values specified at 25°C ambient temperature unless otherwise noted.
13. Wall/Panel Mounting

Panel/ wall mounting is possible by detaching the DIN rail brackets

**Fig. 13-1** Panel/ wall mounting – Removing the aluminium brackets and plastic slide

1. Detach the two aluminum brackets by removing the two screws with a Torx screwdriver (Torx 10).
2. Remove the plastic lock mechanism by using a flat-blade screwdriver to move the lock downwards while pushing the plastic slide upwards at the same time. Detach the plastic slide.
3. Panel/ wall mounting is possible by using either the four holes on the rear or on the bottom of the unit.

**Fig. 13-2** Hole pattern for wall mount

**Fig. 13-3** Hole pattern for bottom mount

All dimensions in mm
14. RECOMMENDATIONS FOR A LONG BATTERY LIFE

Temperature:
The temperature has the most impact on the service life. The hotter the temperature, the earlier the wear-out phase of the battery begins. The wear-out results in a degradation of battery capacity. Place the battery module in a cool location, e.g. near the bottom of the control cabinet. Do not place the battery module near heat generating devices. Do not overcharge batteries!

![Service Life (according to EUROBAT) vs. Ambient Temperature, typ.](image)

Number of discharge cycles and depth of discharge:
Do not discharge batteries more than necessary. Set buffer time limiter to the required buffer time. The number, as well as the depth of discharging cycles is limited. A replacement of the battery might be necessary earlier.
When choosing the battery capacity, always try to get the next higher capacity than required. The depth of discharge reduces the service life of the battery and limits the number of cycles.

![Battery Degradation vs. Discharging Cycles, typ.](image)

Store batteries fully charged
Do not store discharged batteries. Keep batteries fully charged!
Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster then charged batteries. Batteries which are not in use should be recharged at least once a year. The higher the ambient temperature, the shorter the charging interval. At storage temperatures higher than 30°C, recharging should be done at least every nine months.
15. **Mounting Orientations**

The standard mounting orientation is the vertical installation onto a flat surface.

![Standard mounting orientation](image1)

The following mounting orientations are also allowed:

![Allowed mounting orientations](image2)

Do not use the battery module in an upside down position:

![Forbidden mounting orientation](image3)
