**PRODUCT DESCRIPTION**

The UZK12.261 battery module utilizes one non-spillable maintenance-free VRLA lead-acid battery, which is assembled in a package with all wiring and fusing included.

The battery module is available in two different options. It can be ordered as UZK-module with a battery or as UZO-module without a battery which can be installed at a later date to avoid outdated batteries.

**SHORT-FORM DATA**

- **Nominal voltage**: DC 12V
- **Nominal battery capacity**: 26Ah
- **Nominal battery life**: 10 to 12 years According to EUROBAT

**Battery current**

- **Max. 30A**
- **Max. 5.5A**

**Discharging current**

- **At 10°C**
- **At 20°C**
- **At 30°C**
- **At 40°C**

**Recommended charging voltage**

- **13.9V**
- **13.75V**
- **13.6V**
- **13.45V**

**Self-discharge rate**

- **3%/month**
- **At 20°C**

**Battery fuse**

- **30A**
- **ATO® 287 030 from Littelfuse**

**Temperature range**

- **-10°C to +50°C**
- **-15°C to +60°C**

**Size (WxHxD)**

- **214x179x153mm**

**Weight**

- **10.1kg / 22.3lb**
- **700g / 1.54lb**

For details and the complete approval list, see chapter 10

**ORDER NUMBERS**

- **Battery Module**
  - UZK12.261
  - UZO12.26
  - UZB12.261

- **Battery module with assembled batteries**
  - Battery module without assembled batteries

**MAIN APPROVALS**

- **UL 61010-2-201**
- **IECEx**
- **ATEX**
- **DNVCOM/AF**
- **ABS**

Jun. 2021 / Rev. 2.4 DS-UZK12.261

All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.

The information given in this document is correct to the best of our knowledge and experience at the time of publication. If not expressly agreed otherwise, this information does not represent a warranty in the legal sense of the word. As the state of our knowledge and experience is constantly changing, the information in this data sheet is subject to revision. We therefore kindly ask you to always use the latest issue of this document (available under www.pulspower.com).

No part of this document may be reproduced or utilized in any form without our prior permission in writing.

⚠️ WARNING  Risk of electrical shock, fire, personal injury or death.
- Turn power off before working on the device. Protect against inadvertent re-powering.
- Do not modify or repair the unit.
- Use caution to prevent any foreign objects from entering the housing.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on, and immediately after power-off. Hot surfaces may cause burns.
1. **INTENDED USE**

This module is designed for installation in an enclosure and is intended for the general professional use such as in industrial control, office, communication, and instrumentation equipment. Do not use this module in equipment, where malfunction may cause severe personal injury or threaten human life.

2. **INSTRUCTIONS FOR DISPOSAL OF THE BATTERIES**

Always dispose batteries through a recycling organization. Optionally, batteries can be returned to the supplier or the battery manufacturer. Batteries must be completely discharged before recycling. **CAUTION:** The unit contains wet cell batteries. Ventilation of the installation room in accordance with the rules of Canadian Electrical Code, part 1 is required if used in Canada.

3. **INSTRUCTIONS FOR BATTERY STORAGE**

Do not store batteries or battery modules at temperatures higher than 25°C or performance and lifetime may change. Before initial use, check the last charging which is marked on the battery. If it is older than 9 months, replace the battery. Do not store batteries longer than 9 months without charging or performance and lifetime may change. Every 9 months or whenever the open circuit voltage (OCV) falls below 12.6V, the battery module should be charged. Apply a charging voltage of 13.8V (at 25°C) for 72 hours. Batteries with an OCV below 12V should be disposed.

4. **INSTALLATION INSTRUCTIONS**

This device may only be installed and put into operation by qualified personnel. This device does not contain serviceable parts, except the fuse or replacement battery. If malfunction should occur during installation or operation, first check the fuse and battery for proper functionality. If the unit is damaged or if the malfunction continues, immediately turn power off and send device to the factory for inspection. Do not install the battery fuse until the installation work is complete. Replacement fuses must be of the same type or an UL listed fuse with the same nominal value and characteristics. Do not short-circuit the battery poles or power wires and always check correct battery polarity. Mount the device onto a flat surface. Do not install the battery module upside down. Install the device in a cool area inside an enclosure providing protection against electrical, mechanical and fire hazards. Ensure sufficient ventilation by following the requirements of the EN 50272-2. The device is designed for pollution degree 2 areas in controlled environments. No condensation or frost allowed. The enclosure of the device provides a degree of protection of IP00. Do not use batteries other than the original batteries supplied by the manufacturer to avoid conflicts with agency approvals. The maximum surrounding air temperature is +60°C (+140°F). The operational temperature is the same as the ambient or surrounding air temperature and is defined 2cm below the device. Charging is allowed up to +50°C. Frequently charging below +5°C reduces the lifetime of the battery.

Jun. 2021 / Rev. 2.4 DS-UZK12.261
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.

www.pulspower.com  Phone +49 89 9278 0  Germany
The device is designed to operate in areas between 5% and 95% relative humidity.

---

5. INSTALLATION INSTRUCTIONS HAZARDOUS LOCATIONS

The device is suitable for use in Class I Division 2 Groups A, B, C, D locations and for use in Group II Category 3 (Zone 2) environments.

Hazardous Location classification: ATEX: EPS 15 ATEX 1 025 X, II 3G EX ec IIC T4 Gc

**WARNING EXPLOSION HAZARDS!**

Substitution of components may impair suitability for this environment.

Do not disconnect the unit or remove or insert the fuse or battery unless power has been switched off or the area is known to be non-hazardous.

A suitable enclosure must be provided for the end product which has a minimum protection of IP23 and fulfils the requirements of the EN 60079-0. Sufficient ventilation must be ensured in the final installation.

Do not use batteries other than the original batteries supplied by the manufacturer or batteries, which are approved according to EN/ IEC 60079-7.

---

Jun. 2021 / Rev. 2.4 DS-UZK12.261
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.
6. INSTRUCTIONS FOR REPLACING BATTERIES

Batteries need to be replaced periodically. The time interval depends on the ambient temperature in which the battery is used and, on the number, and depth of discharge cycles. In a typical application it is recommended to replace the batteries at least every 5 years. Disconnect battery fuse before replacing the batteries. Do not over-tighten screws of the terminal bolts of the battery. Recommended tightening torque is 3Nm (26 lb.inch).

Regarding disposal of used batteries see chapter 2.

To replace battery:
1) Loosen screw with only one turn.
2) Unscrew the battery terminals.
3) Slide the mounting bracket sideways and take the mounting bracket off.
4) Remove the battery.
5) To insert the new battery, use same procedure vice versa.
   Do not over-tighten screws of the terminal bolts of the battery. Recommended tightening torque: 3Nm (26lb.inch).

---

Jun. 2021 / Rev. 2.4 DS-UZK12.261
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.
13. **Recommendations for a Long Battery Life**

**Temperature:**
The temperature has the most impact on the service life. The hotter the temperature, the earlier the wear-out phase of the battery begins. The wear-out results in a degradation of battery capacity. Place the battery module in a cool location, e.g. near the bottom of the control cabinet. Do not place the battery module near heat generating devices. Do not overcharge batteries!

![Service life (according to EUROBAT) vs. ambient temperature, typ.](image)

**Number of discharge cycles and depth of discharge:**
Do not discharge batteries more than necessary. Set buffer time limiter to the required buffer time. The number, as well as the depth of discharging cycles is limited. A replacement of the battery might be necessary earlier.

When choosing the battery capacity, always try to get the next higher capacity than required. The depth of discharge reduces the service life of the battery and limits the number of cycles.

![Battery degradation vs. discharging cycles, typ.](image)

**Store batteries fully charged**
Do not store discharged batteries. Keep batteries fully charged!
Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster then charged batteries. Batteries which are not in use should be recharged at least once a year. The higher the ambient temperature, the shorter the charging interval. At storage temperatures higher than 30°C, recharging should be done at least every nine months.
14. MOUNTING ORIENTATIONS

The standard mounting orientation is the vertical installation onto a flat surface.

Fig. 14-1  Standard mounting orientation

The following mounting orientations are also allowed:

Fig. 14-2  Allowed mounting orientations

Do not use the battery module in an upside down position:

Fig. 14-3  Forbidden mounting orientation
