

Read this first!

English

Before operating this device, please read this manual thoroughly and retain this manual for future reference! This device may only be installed and put into operation by qualified personnel. If damage or malfunction should occur during operation, immediately turn power off and send device to the factory for inspection. The device does not contain serviceable parts. The information presented in this document is believed to be accurate and reliable and may change without notice. For any clarifications the English translation will be used.

⚠ WARNING

Risk of electrical shock, fire, personal injury, or death:

- Turn power off before working on the device. Protect against inadvertent re-powering.
- Do not open, modify or repair the device.
- Use caution to prevent any foreign objects from entering the housing.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on and immediately after power-off. Hot surfaces may cause burns.

Vor Inbetriebnahme lesen!

Deutsch

Bitte lesen Sie diese Warnungen und Hinweise sorgfältig durch, bevor Sie das Gerät in Betrieb nehmen. Bewahren Sie die Anleitung zum Nachlesen auf. Das Gerät darf nur durch fachkundiges und qualifiziertes Personal installiert werden. Bei Funktionsstörungen oder Beschädigungen schalten Sie sofort die Versorgungsspannung ab und senden das Gerät zur Überprüfung ins Werk. Das Gerät beinhaltet keine Servicebauteile. Die angegebenen Daten dienen allein der Produktbeschreibung und sind nicht als zugesicherte Eigenschaften im Rechtssinne aufzulassen. Im Zweifelsfall gilt der englische Text.

⚠ WARNUNG

Missachtung nachfolgender Punkte kann einen elektrischen Schlag, Brände, schwere Unfälle oder Tod zur Folge haben:

- Schalten Sie die Eingangsspannung vor Installations-, Wartungs- oder Änderungsarbeiten ab und sichern Sie diese gegen unbeabsichtigtes Wiedereinschalten.
- Führen Sie keine Änderungen oder Reparaturversuche am Gerät durch. Gerät nicht öffnen!
- Verhindern Sie das Eindringen von Fremdkörpern, wie z.B. Büroklammern und Metallteilen.
- Betreiben Sie das Gerät nicht in feuchter Umgebung oder in einer Umgebung, bei der mit Btauung oder Kondensation zu rechnen ist.
- Gehäuse nicht während des Betriebes oder kurz nach dem Abschalten berühren. Heiße Oberflächen können Verletzungen verursachen.

A lire avant mise sous tension!

Français

Veuillez lire ces instructions de montage et d'entretien avant de mettre l'alimentation sous tension. Conservez ce manuel qui vous sera toujours utile. Cette alimentation ne doit être installée que par du personnel qualifié et compétent. En cas de dommage ou dysfonctionnement, coupez immédiatement la tension d'alimentation et retournez l'appareil à l'usine pour vérification. L'alimentation ne contient pas de pièces échangeables Les données indiquées dans ce document servent uniquement à donner une description du produit et n'ont aucune valeur juridique. En cas de divergences, le texte anglais fait foi.

⚠ AVERTISSEMENT

Prendre en compte les points suivants, afin d'éviter toute détérioration électrique, incendie, dommage aux personnes ou mort:

- Mettre l'alimentation hors tension avant toute intervention sur celle-ci et s'assurer qu'il n'y a pas risque de redémarrage.
- Ne pas ouvrir, modifier ou réparer l'alimentation.
- Veiller à ce qu'aucun objet ne rentre en contact avec l'intérieur de l'alimentation (trombones, pièces métalliques).
- Ne pas faire fonctionner l'appareil dans un environnement humide ou dans un environnement où il peut y avoir de la condensation.
- Ne pas toucher le carter pendant le fonctionnement ou directement après la mise hors tension. Surface chaude risquant d'entraîner des blessures.

Lea primero!

Español

Conserve este manual como referencia para futuras consultas. La fuente de alimentación solo puede ser instalada y puesta en funcionamiento por personal cualificado. Por favor lea detenidamente este manual antes de conectar la fuente de alimentación. Si se produce un fallo o mal funcionamiento durante la operación, desconecte inmediatamente la tensión de alimentación. En ambos casos, el equipo debe ser inspeccionado en fábrica. La información presentada en este documento es exacta y fiable en cuanto a la descripción del producto y puede cambiar sin aviso. En casa de duda, prevalece el texto inglés.

⚠ ADVERTENCIA

Riesgo de descarga eléctrica, incendio, accidente grave o muerte:

- Desconectar la tensión de red antes de trabajar en la fuente de alimentación. Evite una posible reconexión involuntaria.
- No realizar ninguna modificación o reparación de la unidad. No abrir la unidad.
- Evitar la introducción en la carcasa de objetos extraños.
- No usar el equipo en ambientes húmedos. No operar el equipo en ambientes donde se espere la formación de rocío o condensación.
- No tocar durante el funcionamiento ni inmediatamente después del apagado. El calor de la superficie puede causar quemaduras graves.

Leggere prima questa parte!

Italiano

Prima di collegare il sistema di alimentazione elettrica si prega di leggere attentamente le seguenti avvertenze. Conservare le istruzioni per la consultazione futura. Il sistema di alimentazione elettrica deve essere installato solo da personale competente e qualificato. Se durante il funzionamento si verificano anomalie o guasti, scollegare immediatamente la tensione di alimentazione. In entrambi i casi è necessario far controllare l'apparecchio dal produttore! I dati sono indicati solo a scopo descrittivo del prodotto e non vanno considerati come caratteristiche garantite dell'apparecchio. In caso di differenze o problemi è valido il testo inglese

⚠ AVVERTENZA

Il mancato rispetto delle seguenti norme può provocare folgorazione elettrica, incendi, gravi incidenti e perfino la morte:

- Prima di eseguire interventi di installazione, di manutenzione o di modifica scollegare la tensione di rete ed adottare tutti i provvedimenti necessari per impedire il ricollegamento non intenzionale.
- Non tentare di aprire, di modificare o di riparare da soli l'apparecchio.
- Impedire la penetrazione di corpi estranei nell'apparecchio, ad esempio fermagli o altri oggetti metallici.
- Non far funzionare l'apparecchio in un ambiente umido. Non far funzionare l'apparecchio in un ambiente soggetto alla formazione di condensa o di rugiada.
- Non toccare quando acceso e subito dopo lo spegnimento. La superficie calda può causare scottature.

Português

Recomendamos a leitura cuidadosa das seguintes advertências e observações, antes de colocar em funcionamento a fonte de alimentação. Guarde as Instruções para futura consulta, em casos de dúvida. A fonte de alimentação deverá ser instalada apenas por profissionais da área, tecnicamente qualificados. Se por acaso, durante a utilização ocorrer algum defeito de funcionamento ou dano, desligue imediatamente a tensão de alimentação. Em ambos os casos, será necessária uma verificação na Fábrica! Os dados mencionados têm como finalidade somente a descrição do produto, e não devem ser interpretados como propriedades garantidas no sentido jurídico. Em caso de dúvidas aplica-se o texto em inglês.

⚠ ATENÇÃO

A não observância ou o incumprimento dos pontos a seguir mencionados, poderá causar uma descarga elétrica, incêndios, acidentes graves ou morte:

- Antes de trabalhos de instalação, manutenção ou modificação, desligue a tensão de alimentação, protegendo-a contra uma nova ligação involuntária.
- Não efectue nenhuma modificação ou tentativa de reparação no aparelho. Quando necessário contacte o seu distribuidor. Não abra o aparelho.
- Proteger a fonte de alimentação contra a introdução inadvertida de corpos metálicos, como por ex., cliques ou outras peças de metal.
- Não usar o aparelho em ambientes húmidos. Não usar o aparelho em ambientes propensos a condensações.
- Não tocar enquanto estiver em funcionamento, nem após a desligar. A superfície poderá estar quente e provocar lesões.

Product Description

The PISA-B-8CL2-B1 is a DIN-rail mountable eight channel protection module with integrated electronic fuses for 24V systems.

The outputs of each channel fulfil the requirements for a limited power source acc. to NEC Class 2.

Intended Use

This device is designed for installation in an enclosure and is intended for commercial use, such as in industrial control, process control, monitoring and measurement equipment or the like.

Do not use this device in equipment, where malfunctioning may cause severe personal injury or threaten human life without additional appropriate safety devices, that are suited for the end-application.

If this device is used in a manner outside of its specification, the protection provided by the device may be impaired.

Installation Instructions

Install the device in an enclosure providing protection against electrical, mechanical and fire hazards.

Install the device onto a DIN-rail according to EN 60715 with the input terminals on top of the unit.

Up to eight devices can be connected via two bus bars, where only the first device is connected to the power supply. The bus bars must be long enough to make a connection to all contacts of the devices.

Use an appropriately sized 24V power supply, which can deliver the peak current required to trip the load channels. If peak currents are too low, the supply voltage for the protection module can no longer be maintained, which results in a malfunctioning of the protection module.

Make sure that the wiring is correct by following all local and national codes. Use appropriate copper cables that are designed for a minimum operating temperature of 60°C for ambient temperatures up to +45°C, 75°C for ambient temperatures up to +60°C and 90°C for ambient temperatures up to +70°C. Ensure that all strands of a stranded wire enter the terminal connection.

The device is designed for pollution degree 2 areas in controlled environments. No condensation or frost is allowed.

The enclosure of the device provides a degree of ingress protection of IP20. The housing does not provide protection against spilled liquids.

The isolation of the devices is designed to withstand impulse voltages up to 1.5kV according to IEC 60664-1.

The input can be powered from a regulated power supply or a similar DC source.

The input must be powered from a PELV or SELV source or an "Isolated Secondary Circuit" in order to maintain a SELV or PELV output.

Check for correct input polarity. The device will not operate when the voltage is reversed.

A disconnecting means shall be provided for the input of the device.

The device is designed as "Class of Protection III" equipment according to IEC 61140.

The device is designed for convection cooling and does not require an external fan. Do not obstruct airflow and do not cover ventilation grid!

Keep the following minimum installation clearances: 40mm on top, 20mm on the bottom, 5mm left and right side. Increase the 5mm to 15mm in case the adjacent device is a heat source. Between multiple PISA-B modules, no clearance is needed.

The device is designed for altitudes up to 5000m (16 400ft).

The maximum surrounding air temperature is +70°C (+158°F). The operational temperature is the same as the ambient or surrounding air temperature and is defined 2cm below the device.

The device is designed to operate in areas between 5% and 95% relative humidity.

Functional Description

The output can supply any kind of loads, including inductive and capacitive loads. The maximum size of capacitive loads is specified in the "Technical Data" table on the right. Larger load capacitors might result in an unintended turn-off of the channel.

Do not apply return voltages from the load to the output terminals higher than 30V.

Do not parallel outputs for higher output currents.

Do not connect outputs in a series connection for higher output voltages.

Do not connect batteries for charging purposes to the output of the device.

Output channels can be switched on and off separately by pushing the corresponding control button for longer than 50ms. A switched off channel is displayed with the uppermost red LED of the LED bar graph.

The green and yellow LEDs of the LED matrix display indicate the channel current in percent of the nominal value. Peak values are stored in a peak detector and are additionally shown with one LED for a short period of time.

After an over-current trip, which is displayed with a flashing of the uppermost red LED of the LED bar graph, channels can be reset either with the channel control button (push longer than 1s) or remotely with the reset input. Resetting by means of the reset input is done by applying a voltage between 10 and 30Vdc (max. 6mA current consumption) for longer than 1s. The reset input is galvanically isolated from the rest of the device.

The device is equipped with an alarm contact. The contact closes as soon as one output channel has switched off (common signalling) or the input voltage is lower than 19Vdc. Contact ratings: max. 30Vdc 1A, 30Vac 0.5A, resistive load, min. current 1mA.

The tripping characteristic can be set as a common parameter for all channels. To change the characteristic alternately push the SET and channel control button for channel 3 at the same time. The selected option is shown on the LED matrix for 2 seconds. Letter F indicates the fast and the letter S the slow acting characteristic. If only the SET button is pressed, the characteristic is displayed for 2s.

Tripping characteristic setting can be protected against changes with a PIN code. To lock the settings push the SET and channel control button 1 until the unit shows a moving text "PIN TO LOCK". Enter a 4-digit PIN by pushing any combination of channel control buttons 1-8. Push the SET button to save the PIN, the unit shows a moving text "LOCKED".

To unlock settings push the SET and channel control button 1, the unit shows a moving text "PIN TO UNLOCK" and enter the 4-digit PIN you selected and confirm it by pushing the SET button.

Factory settings are that all channels are turned on in fast tripping characteristic mode.

The device is equipped with a LED matrix display. This display provides information about the actual current values (average and peak) of the individual output channels, reports faults and helps to parameterise the device.

Technical Data

All values are typical figures specified at 24Vdc input voltage, 8x NEC CLASS 2 outputs, 25°C ambient temperature and after a 5 minutes run-in time unless otherwise noted.

Input voltage	DC 24V	-20%/+25%
Required input voltage for turning-on of outputs	19.6Vdc	
Input current	40A	
Internal consumption	40mA	
Nominal output current	3.75A	Per channel
Current limitation	5.7A	For CH1-CH2
	50A	For CH3-CH8
Tripping characteristics	Slow or fast	Selectable
Tripping delay		
CH1-CH2	2ms – 1.1s	At short circuit
CH3-CH8	<10ms	At short circuit
CH1-CH8	1.1s	For slow tripping setting at 1.5x nominal current
		For fast tripping setting at 1.5x nominal current
CH1-CH8	0.22s	
Max load capacitance capability		
CH1-CH2	100mF	Per channel
CH3-CH8	20mF	Per channel
Voltage drop per channel		
CH1-CH2	45mV	At 3.75A load current
CH3-CH8	60mV	At 3.75A load current
Standby losses	1W	
Power losses	7W	At 8x 3.75A load current
Temperature range	-25°C to 70°C	
Max. wire size (litz wire)	16mm ²	For input terminals
Max. wire size with ferrules	10mm ²	For input terminals
Wire size AWG	AWG 20-4	For input terminals
Maximum wire diameter	6.1mm	For input terminals
Wire stripping length	19mm/ 0.75inch	For input terminals
Max. wire size (litz wire)	2.5mm ²	For output terminals
Max. wire size with ferrules	1.5mm ²	For output terminals
Wire size AWG	AWG 24-12	For output terminals
Maximum wire diameter	2.3mm	For output terminals
Wire stripping length	10mm / 0.4inch	For output terminals
Max. wire size (litz wire)	2.5mm ²	For signal terminals
Max. wire size with ferrules	1.5mm ²	For signal terminals
Wire size AWG	AWG 24-12	For signal terminals
Maximum wire diameter	2.3mm	For signal terminals
Wire stripping length	10mm / 0.4inch	For signal terminals
Size (w x h x d)	52x124x130mm	Without DIN-rail
Weight	370g/0.82lb	

Functional Diagram

Output Current vs. Input Voltage

Key Combination Overview

- SET + CCB1 button = lock/unlock setting with PIN
- SET + CCB2 button = show FW versions
- SET + CCB3 button = fast/slow tripping characteristic

Wiring Scheme

Tripping Diagrams

The following curves show the let-through current areas, which are located to the left of the curves, and the tripping areas, which are located to the right of the curves.
